

CITIZENS OF INDIA

AI for Constituency Development Planning — Built on Google Cloud

Turning 930 million citizen voices into actionable intelligence for India's MPs

Google Cloud Hackathon · People's Priorities Track · gowtham66866@gmail.com · github.com/gowtham66867/citizens-of-india

GOOGLE CLOUD SERVICES USED

Gemini 2.5 Flash Lite	Cloud Run (Serverless)	Cloud Scheduler	Cloud Translation API	Cloud Speech-to-Text	Google Cloud Container Registry
-----------------------	------------------------	-----------------	-----------------------	----------------------	---------------------------------

THE PROBLEM

India's Governance Gap is a \$40B Opportunity

543 Lok Sabha Constituencies	930M Registered Voters	Rs.3.2L Cr Annual MPLAD & Dev Spend	<2% Citizens Give Formal Feedback
---------------------------------	---------------------------	--	--------------------------------------

Public development spending decisions are made with **almost zero structured citizen input**. Town halls reach <0.1% of a constituency. Paper forms are never digitised. Regional languages — spoken by 78% of India — are invisible to policy. Result: misallocated MPLAD funds, repeated infrastructure failures, citizen disillusionment.

OUR SOLUTION — BUILT ON GOOGLE CLOUD

One Platform. Every Voice. Instant Intelligence.

CAPTURE	GEMINI AI	AGENT PIPELINE	MP BRIEFING
Text · Voice · Photo WhatsApp · SMS Any Indian language	Cloud Translation API Gemini 2.5 Flash Lite Classify in <2 sec	Claude Subagents Semantic cluster Urgency x Reach score	Cloud Run API Real-time heatmap Downloadable report

BUSINESS VALUE

What Every Stakeholder Gains

Stakeholder	Current Pain	Value with Citizens of India	Outcome
MP / MLA	Anecdotal feedback, slow decisions	Data-driven briefing every Monday via Cloud Scheduler	10x more issues surfaced
Rural Citizen	No voice, language barrier	WhatsApp/voice in mother tongue — Gemini translates instantly	First time heard digitally
State Government	Manual aggregation, months of lag	Real-time theme heatmaps streamed via Cloud Run API	Policy response in days
NGOs & Media	No structured ground truth	Open API on Cloud Run — queryable citizen priority data	Evidence-based advocacy
MPLAD Office	Reactive fund allocation	Urgency-ranked pipeline scored by Claude AI agents	Better ROI on Rs.5 Cr/MP spend

GO-TO-MARKET & REVENUE MODEL

From Hackathon to National GCP-Powered Infrastructure

Phase 1 — Pilot (0–6 months)	Phase 2 — State SaaS (7–18 months)	Phase 3 — National (Year 2+)
5 pilot constituencies Free for MPs Gemini free tier Cloud Run free tier	State Govt licence Rs.5L / district / year WhatsApp Business API Firestore + Cloud SQL	NIC / MeitY partnership 543 constituencies Rs.25 Cr ARR potential Full GCP enterprise stack

COMPETITIVE MOAT

Why This Is Hard to Replicate

Advantage	What It Means	Why Competitors Can't Copy Easily
Gemini multilingual AI	22 Indian languages via Google Cloud Translation + Gemini	Requires deep GCP integration, massive multilingual training data
Multi-agent reasoning	4 Claude subagents on Cloud Run: cluster, score, brief	Needs Anthropic + GCP expertise and complex prompt engineering
Omnichannel capture	WhatsApp, voice, photo, SMS — zero app install	Rural reach needs telecom + Speech-to-Text + zero-literacy UX
Cloud-native automation	Cloud Scheduler runs weekly briefs autonomously	Most civic tech is batch-processed, not event-driven cloud-native
Data network effect	More submissions > better Gemini clustering > better policy	Cold-start moat; compounds with every citizen submission

Enterprise-Grade GCP Stack — Built in 72 Hours

GCP Service / Layer	Technology	Role in the Platform
Gemini 2.5 Flash Lite	google-genai SDK · REST API	Multilingual triage: theme, urgency, sentiment, location in <2 sec
Cloud Run (Python 3.11)	FastAPI + Uvicorn · Docker · GCR	Serverless API — auto-scales to zero, public HTTPS endpoint
Cloud Translation API	google-cloud-translate v3	Detects and translates 22 Indian languages to English
Cloud Speech-to-Text	google-cloud-speech v2	Transcribes voice submissions (WhatsApp audio, field recordings)
Cloud Scheduler	Cron jobs — weekly + daily triggers	Autonomous Monday briefing + daily theme aggregation per constituency
Container Registry (GCR)	gcr.io/gowthamaccount/...	Stores versioned Docker images; deployed directly to Cloud Run
Claude claude-sonnet-4-6 Agents	Anthropic API · MCP stdio server	4 subagents: DataAgent -> ClusterAgent -> PriorityAgent -> BriefingAgent
React + GitHub Pages	gh-pages · axios · SSE EventSource	MP Dashboard and Citizen forms — zero-cost static hosting
SQLite / Firestore path	sqlite3 (demo) · firebase-admin (prod)	Zero infra cost for hackathon; Firestore for production scale

LIVE DEMO — END-TO-END FLOW

The 90-Second Constituency Intelligence Loop

01 Submit	Citizen opens the web app and submits a complaint in Telugu about a broken road.
02 Gemini Triage	Cloud Translation API detects Telugu, translates. Gemini 2.5 classifies: Roads & Infrastructure / High Urgency / GPS extracted. All in <2 sec.
03 Dashboard Live	MP opens the Cloud Run-hosted dashboard. Heatmap updates, theme chart shows Roads trending, submission appears in the live feed.
04 Agent Pipeline	MP clicks 'Run AI Analysis'. 4 Claude subagents stream progress via SSE: Fetch -> Cluster -> Prioritize -> Briefing (live step-by-step).
05 MP Briefing	Structured brief: top 3 clusters, urgency x reach scores, affected population, recommended actions. Downloadable .txt.
06 Autopilot	Cloud Scheduler fires every Monday 8 AM IST — full pipeline runs autonomously for all 4 constituencies. MP wakes up to fresh intelligence.

LIVE ON GOOGLE CLOUD — RIGHT NOW

93 Live Submissions	10 Issue Themes	5 Indian Languages	85 Tests Passing	6 MCP Tools	4 Claude Subagents
------------------------	--------------------	-----------------------	---------------------	----------------	-----------------------

ADVANCED CLAUDE CODE FEATURES

Feature	Implementation	Business Value
MCP Server	6 tools via stdio — submit_issue, get_priorities, run_agent_pipeline...	Claude Desktop queries live GCP-hosted citizen data in plain English
Multi-Agent Pipeline	claude-sonnet-4-6 orchestrator, tool_use loop, 4 subagents on Cloud Run	Scales to any constituency; each agent specialises for accuracy
SSE Streaming	EventSource -> /agents/stream; live step-by-step pipeline UI	MPs see AI reasoning live — builds trust in the output
Cloud Scheduler Cron	Weekly + daily GCP Scheduler jobs; CRON_SECRET header auth	Fully autonomous intelligence — zero manual MP intervention
CLAUDE.md + Hooks	CLAUDE.md loads full GCP architecture; post-tool-use.sh syntax checks	Production-quality code — every edit validated before it can break Cloud Run
